

26 workflows, one habit.

Mathieu Tellene · automation and AI built at Cabify

Every n8n workflow I have published and left running in production, one per page, captured from the live canvas. Five project areas, 26 live workflows, 537 nodes. The numbers on each page describe the flow itself — how many nodes, how much of it is AI, where it branches — not the business results, which belong in a different conversation.

26

workflows live in production

537

nodes across all of them

PROJECT

Booking a Cabify without the app

OEX_Cabify WhatsApp · n8n

One conversational agent and the satellite flows around it: address resolution against 44 city hubs, quoting, booking, cancellation, live journey tracking, the static map, the invoice and the post-trip support ticket. This is the project that produced the company's first fully automated ride.

PROJECT

Asset Quality Management: capture, audit, pay

OEX_AQM · n8n

The whole quality loop for a 21,000+ vehicle fleet. Capture services behind four live forms, the vision analysis engine that scores every photo against the official reference, the daily flows that keep fleet data and licence validation current, and the single database that turns an audit into a bonus payment.

PROJECT

A corporate account, automated end to end

OEX_RTVE BCN · n8n

Two mail intakes, two AI agents that cross-check what the client asked against what the supplier committed to, and the flows that create the ride and pre-assign the named driver. Nothing is booked while the check disagrees.

PROJECT

The weekly control tower

OEX_COPs · n8n

One flow that reads 35 operational processes out of Tableau every week, has an LLM read each chart, maps the result into a master sheet and raises deviations in Slack by itself.
