Madrid, relocating to Berlin in October 2026, available full-time · EU citizen, no work permit needed · French and Spanish native, English C1, German A1 (learning)

PROFILE

Automation analyst in Cabify's Operational Excellence team in Spain, with an industrial engineering background. I turn manual operations work into systems that run on their own: AI agents and n8n automations with Claude and local models, internal web apps and data pipelines in Python and SQL, and computer vision and forecasting models I train myself. 20+ n8n workflows in production. Case studies at mathieutellene.github.io/portfolio.

EXPERIENCE

Cabify · OEx Automation Analyst

May 2026 to present

Madrid, hybrid. Two promotions in six months: Customer Operations Trainee (Nov 2025), Operational Excellence Analyst (Mar 2026).

- **Fleet branding audit with vision AI (technical owner).** Photo capture with quality checks, an AI audit that compares each photo with its reference design, one record per vehicle and reporting for the teams. More than 20,000 photos audited with above 95% agreement with human review, under an hour from photo to verdict. Run by the local teams since September 2026.
- **Hybrid ML + LLM vision.** Small CNN and OCR models I trained take the repetitive checks off the LLM, with a confidence gate for the rest: about 80% lower inference cost.
- **Driver quality score (delivery lead).** One score per driver compared within comparable cohorts, with a Python and PostgreSQL engine.
- **KPI monitoring.** Python and PostgreSQL pipeline that extracts the KPIs of a weekly operations review every day, judges each against a realistic range and a forecast, and alerts each owner in Slack.
- **Change requests as rules.** Approval portal where every exception becomes a rule with an author, a reason and an expiry, plus a Python and Playwright service that uploads the resulting files unattended. About 25 hours a month of manual work removed.
- **AI agents.** WhatsApp ride-booking agent (first ride booked end to end with no human, May 2026); a Help Center support agent that solves most chats without a person; an email-to-booking pipeline with a human approval step.
- **Forecasting.** Prophet grid search with a hidden holdout for daily volume, model-based quarterly KPI targets, and an Erlang C and OR-Tools CP-SAT shift planner for a contact centre.
- n8n trainer at the company academy: co-teaching the Level 2 workshop (30 September 2026) on two of my production workflows.

Collins Aerospace · Production and Logistics Engineering Intern

Jul 2025 to Sep 2025

Getafe, Madrid

- Traced over-ordering on a manufacturing cell to ERP discrepancies and recalculated minimum, maximum and reorder points: about 35% lower inventory cost on that cell. Value stream mapping led to a new task sequence and about 15% more output. The site later offered me a full-time position.

EDUCATION

B.Eng. Industrial Organization Engineering
Universidad Rey Juan Carlos, Madrid · 2021 to 2027, thesis pending (expected May 2027) · GPA 7.71/10 with honours

First year of software engineering, Universidad Politécnica de Madrid (2020 to 2021). French baccalaureate, Lycée français de Madrid.

COURSES

Agentic AI, DeepLearning.AI (in progress) · Machine Learning Specialization, DeepLearning.AI and Stanford (2026) · Business for All, Harvard Business School (2024)

SKILLS

Automation and AI: n8n, Claude API (tool use, prompt caching), multi-agent pipelines, MCP, Claude Code, LLM gateways, Ollama, Playwright

Data: Python (pandas), SQL and PostgreSQL, Redshift, Tableau and its REST API, Google Apps Script, Looker Studio, Grafana

Modelling: PyTorch, Keras, YOLOv8, EasyOCR, Prophet, LightGBM, SARIMAX, OR-Tools CP-SAT, Erlang C

Operations: process mapping, value stream mapping, KPI design, workforce planning, Git and GitLab CI
