Berlin · product intern at Cloover from Nov 2026 · EU citizen, no work permit needed · French and Spanish native, English C1, German A1 (learning)

PROFILE

Automation analyst from Cabify's Operational Excellence team in Spain, with an industrial engineering background. I turn manual operations work into systems that run on their own: AI agents and n8n automations, internal web apps and data pipelines, and models I train myself. 55 n8n workflows in production. Case studies at mathieutellene.github.io.

EXPERIENCE

Cabify · OEx Automation Analyst

May 2026 to Nov 2026

Madrid, hybrid, remote from Berlin since October. Promoted twice in six months: Customer Operations Trainee (Nov 2025), Operational Excellence Analyst (Mar 2026).

- **Fleet branding audit with vision AI** (technical owner). Photo capture with quality checks and an AI audit against each vehicle's reference design: about 100 vehicles a day at above 95% agreement with human review.
- **KPI monitoring.** The daily extraction behind a weekly operations review, each KPI judged against a realistic range and a forecast: about 1,700 KPIs a day from 55 processes, straight from the data warehouse.
- **Change requests and bulk uploads.** Exceptions become rules with an author, a reason and an expiry; the files are applied through an internal API with a watchdog: about 8,000 changes a day, 99.5% of rows ending well.
- **AI agents.** A WhatsApp ride-booking agent, rebuilt in October and live in a pilot; a Help Center support agent (May to October, about 95 chats a day, 90% solved alone); an email-to-booking pipeline with a human approval step.
- **Emergency shared-van service.** Booking web, two-role panel, n8n workflows and emails, built in about 48 hours during a rail closure.
- **Models and forecasting.** Small CNN and OCR models take repetitive checks off the LLM, about 80% lower inference cost; Prophet forecasts that beat the official one on daily error; an Erlang C and CP-SAT planner.
- **Also:** a driver quality score (delivery lead), and n8n trainer at the company academy.

Collins Aerospace · Production and Logistics Engineering Intern

Jul 2025 to Sep 2025

Getafe, Madrid

- Traced over-ordering to ERP discrepancies and reset reorder points: about 35% lower inventory cost on one cell; value stream mapping added about 15% output. Offered a full-time position.

EDUCATION

B.Eng. Industrial Organization Engineering
Universidad Rey Juan Carlos, Madrid · 2021 to 2027, thesis pending (expected May 2027) · GPA 7.71/10 with honours

First year of software engineering, UPM (2020 to 2021) · French baccalaureate, Lycée français de Madrid

COURSES AND CERTIFICATES

- **Agentic AI** · DeepLearning.AI — in progress
- **AI Agents Course** · Hugging Face — next
- **Machine Learning Specialization** · DeepLearning.AI and Stanford Online — 2026
- **Business for All** · Harvard Business School — 2024

SKILLS

Automation and AI: n8n, Claude API, MCP, Claude Code, LiteLLM, Ollama, Playwright

Data and web: Python, SQL, PostgreSQL, Redshift, Tableau, Apps Script, Go, React

Modelling: PyTorch, Keras, YOLOv8, Prophet, LightGBM, OR-Tools CP-SAT

Operations: process mapping, KPI design, workforce planning, Git and GitLab CI
