PROFILE

Industrial Engineer working on **AI and automation** at **Cabify** (ride-hailing, 40+ cities). I build the systems that run the Spanish operation: **computer-vision fleet audits**, **WhatsApp booking agents**, **forecasting models** and internal tools. **26 are live in production**, and two were presented at the company's **Global All Hands**. Moving to **Berlin in October 2026**.

EXPERIENCE

AI & Business Automation Analyst

NOV 2025 — PRESENT

Cabify · Madrid, hybrid · **Promoted twice in 8 months**: Customer Operations Trainee → Operational Excellence Analyst → OEx Automation Analyst

- **AQM, fleet quality audits.** Reviews the photo evidence behind driver incentives across a 4,000+ vehicle fleet: vinyl, damage, cleanliness and plate OCR. 22,000 images at 96% accuracy, covering roughly **€500K a month** in incentives nobody was verifying before. I trained the CNN and OCR models myself and escalate only judgement calls to an LLM, which cut the AI bill by 80% and keeps driver data in-house. Product has adopted it as a native initiative; I still run the live system.
- **DQM, driver quality score.** One 0–100 score per driver built from signals that today sit in five separate systems, with a forecast and an escalation ladder on top. It is the company priority I am delivering this half.
- **WhatsApp booking agent.** Scan a QR, have a conversation, get a car. Produced the first Cabify ride booked with nobody in the loop; **71% of scans** become a ride request. Live at a stadium, an international airport and a corporate account, with Redis session memory, anti-fraud checks and automatic invoicing.
- **Corporate account automation.** Two documents arrive by email from two different senders; two Claude agents cross-check them, create the ride and assign the driver without anyone touching it. **200–300 rides a day** that used to be dispatched by hand.
- **CabiBot, Help Center agent.** Public support agent on Cabify's Help Center. **15,000 conversations**, over 90% closed without a human; the rest become a Zendesk ticket with the full context attached.
- **Forecasting and reporting.** Prophet, LightGBM and SARIMAX models forecasting operational KPIs in 12 cities, **58% more accurate** than the previous estimates, plus the weekly board that consolidates 35 Tableau processes and alerts Slack when one drifts.
- **Cabify Academy.** Chosen by Talent Development to run the internal n8n workshops.

Production & Logistics Engineering Intern

JUL — SEP 2025

Collins Aerospace · Getafe, Spain · aerospace manufacturing

- Cut inventory costs **35%** by auditing ERP discrepancies and recalculating MIN/MAX levels and reorder points across production lines, and improved line efficiency **15%** through Value Stream Mapping. The site came back to me months later with a full-time offer.

TECHNICAL SKILLS

AI & AUTOMATION

n8n (advanced) · Claude API & MCP · AI agents · RAG · prompt engineering · REST APIs & webhooks

DEVELOPMENT

Python · JavaScript · Claude Code · Git/GitHub · Google Apps Script · Redis · Lovable

EDUCATION

BSc Industrial Organization Engineering

Universidad Rey Juan Carlos, Madrid · GPA 7.71/10, honours distinctions
Sep 2021 — Oct 2026

Software Engineering, first year

Universidad Politécnica de Madrid
Sep 2020 — May 2021

MACHINE LEARNING

Computer vision · deep learning · CNNs for image classification & OCR · supervised & unsupervised learning · TensorFlow · PyTorch · scikit-learn · time-series forecasting (Prophet, LightGBM, SARIMAX)

DATA & ANALYTICS

SQL · Tableau · Looker Studio · BigQuery · Google Colab · Excel (advanced)

CERTIFICATIONS

Machine Learning Specialization

DeepLearning.AI & Stanford University
Feb 2026

Business for All

Harvard Business School Publishing · 2024

In progress

Anthropic Academy (Claude API, Claude Code, MCP) · Microsoft PL-900

INTERESTS

National-level triathlete · DJ · Entrepreneurship · Active Investor
